

ADVANCED

1. Percentage contribution of each pizza type to total revenue:

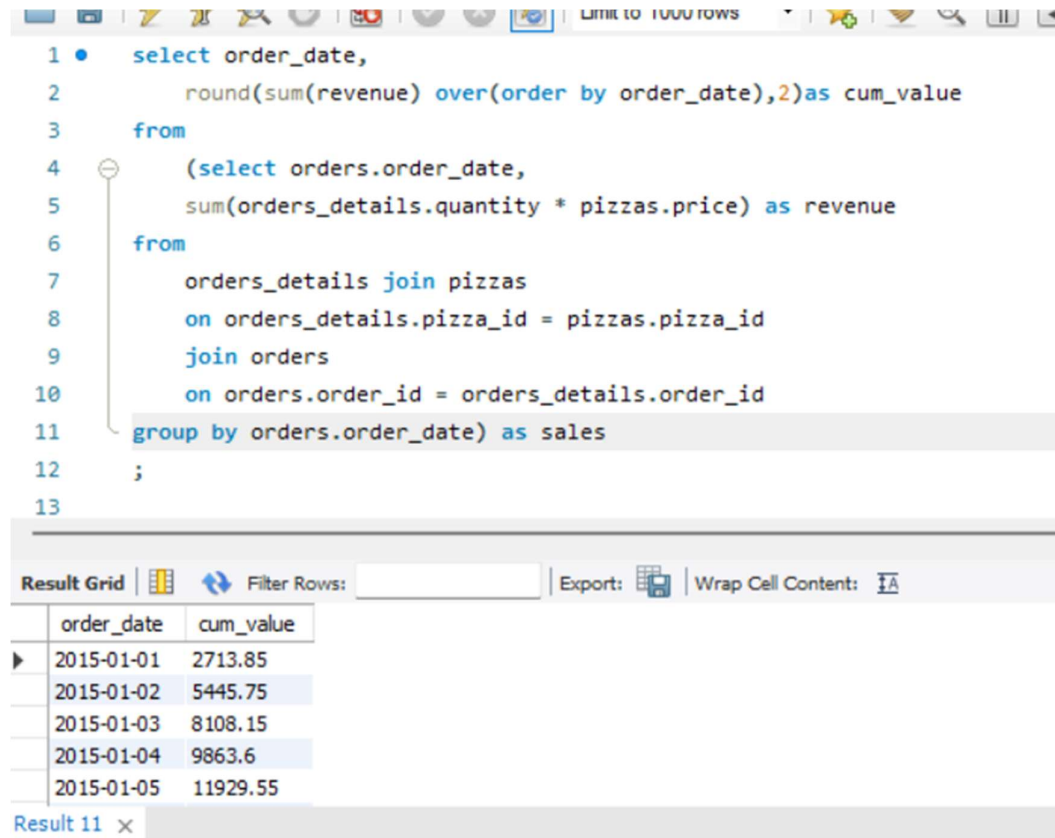

```
1 • select pizza_types.category,
2   round(sum(orders_details.quantity * pizzas.price) / (SELECT
3     ROUND(SUM(orders_details.quantity * pizzas.price),
4       2) AS total_rev
5   FROM
6     orders_details
7   JOIN
8     pizzas ON pizzas.pizza_id = orders_details.pizza_id) * 100,2) as revenue
9   from pizza_types join pizzas
10  on pizza_types.pizza_type_id = pizzas.pizza_type_id
11  join orders_details
12  on orders_details.pizza_id = pizzas.pizza_id
13  group by pizza_types.category
```

Result Grid

	category	revenue
▶	Classic	26.91
	Supreme	25.46
	Chicken	23.96
	Veggie	23.68

2. Cumulative revenue generated over day:

The screenshot shows a SQL query editor with a toolbar at the top. The query is as follows:

```
1 • select order_date,  
2     round(sum(revenue) over(order by order_date),2)as cum_value  
3 from  
4     (select orders.order_date,  
5        sum(orders_details.quantity * pizzas.price) as revenue  
6     from  
7         orders_details join pizzas  
8         on orders_details.pizza_id = pizzas.pizza_id  
9         join orders  
10        on orders.order_id = orders_details.order_id  
11     group by orders.order_date) as sales  
12 ;  
13
```

Below the query editor is the 'Result Grid' section. It includes a 'Filter Rows' input field, an 'Export' button, and a 'Wrap Cell Content' checkbox. The results are displayed in a table with two columns: 'order_date' and 'cum_value'.

order_date	cum_value
2015-01-01	2713.85
2015-01-02	5445.75
2015-01-03	8108.15
2015-01-04	9863.6
2015-01-05	11929.55

At the bottom, there is a tab labeled 'Result 11' with a close button (X).
